EDUCATION

University of Miami

Bachelor of Science in Computer Science

Coral Gables, FL

May 2029

- **Minors:** Mathematics and Quantitative Economics
- **GPA:** 3.7 | **Honors:** President's Scholarship, Dean's List, Florida Academic Scholars
- **Relevant Courses:** Computer Programming I & II, Calculus II, Microeconomics, Public Speaking

EXPERIENCE

SongTools

IT Project Coordination Intern

Miami, FL

June 2026 – Aug. 2026

- Supported a company-wide migration from songtools.io to songtools.com, tracking changes to 28 employee email accounts, code references, and file directory paths
- Maintained an Excel tracker over 10 weeks, gathering progress updates and blockers through twice-weekly WhatsApp and phone check-ins with 5 developers and staff
- Delivered a one-page status report to the CEO summarizing completed migration work, outstanding items, and schedule risk at handoff

PROJECTS

FuelCast | Base44 (AI app builder) | uStart x Base44 Hackathon

[Live App](#)

- Solo-built a phone-first web app that tells UM students when and where to buy gas, using a 7-day price estimate and a net-cost ranking that counts the fuel burned driving to each station
- Designed the data model and forecast logic: 30 days of price history across 6 verified stations and 3 fuel grades, calibrated to AAA Florida averages, with the trend calculated in code and an AI-written summary cached for 12 hours to save AI credits
- Tested the live app as a logged-out user across 8 rounds, catching a backend error that would have broken the forecast for every visitor

Connect Four Game | Java

[GitHub](#)

- Built an object-oriented Connect Four console game managing turns, moves, and a 6×7 board
- Implemented win detection for horizontal, vertical, diagonal, and anti-diagonal sequences
- Developed a rule-based computer opponent that clones board states to identify winning moves and block immediate losses, across four play and difficulty modes

Student Record & Transcript System | Python

[GitHub](#)

- Built a menu-driven console program with Student and Course classes to manage student records, compute 4.0-scale GPAs, and generate transcript files
- Validated program behavior and edge-case handling against expected output

Personal Portfolio Website | HTML, CSS, JavaScript

[Website](#)

- Built and deployed a responsive personal site with semantic HTML, keyboard navigation, and reduced-motion support for accessibility
- Shipped to production via GitHub Pages with a Codespaces-based development workflow

SKILLS & ACTIVITIES

Programming Languages: Python, Java, SQL

Tools: GitHub, Excel, Base44

Activities: Kappa Theta Pi Technological Fraternity, Google Developer Group, ColorStack, Golf Club, Association of Commuter Students
